amsight

Working Student or Master Thesis
Software Developer (m/w/d)

Who we are

We are a spin-off from Fraunhofer IAPT with the vision of developing the best software for data management and quality assurance in the industrial 3D Printing sector (B2B). We believe that Additive Manufacturing is the most resource-efficient way to produce products and want to support the growth of the industry with our company. We are a young and enthusiastic team that emphasizes a good working culture.

What you will do

As a key member of our team, you'll contribute to the development of our amsight software. You'll work in a small, but very experienced software development team and will play a pivotal role in driving our success. Depending on your passion, a focus on back-end (mainly Python and C#) or front-end development (mainly Angular and Typescript) is possible.

What is in for you?

- Interesting job and opportunity to get real world working experience.
- Flexible working hours and remote work.
- Opportunity to also write your Bachelor- or Master-Thesis in our company.

What we are looking for

We are seeking a team-oriented IT-student that is eager to work in an agile start-up environment with a lot of growth opportunities. If you have an interest in Additive Manufacturing as well as a 2-3 years' experience in software development – that's a bonus.

How to apply

Interested in being part of our journey? Just write us a short mail or connect with me on LinkedIn (contact details provided in the footer). Let us know why you would like to work with us.
